Load balancers (1) What's new?
Elastic Load Balancing scales your load balancer capacity automatically in response to changes in incoming traffic.

EC2 > Auto Scaling groups > Practical-Web-ASG > Dynamic scaling policy
Create dynamic scaling policy
Policy type
Target tracking scaling
Scaling policy name
Target Tracking Policy
Metric type Info
Monitored metric that determines if resource utilization is too low or high. If using EC2 metrics, consider enabling detailed monitoring for better scaling performance.
Average CPU utilization
Target value
70
Instance warmup Info
300
seconds
Disable scale in to create only a scale-out policy
Cancel
Create

EC2 > Auto Scaling groups > Practical-Web-ASG

instances require more time to initialize.

Dynamic scaling policies (1) Info

Actions | Create dynamic scaling policy

Target Tracking Policy

Policy type
Target tracking scaling

Enabled or disabled
Enabled

Execute policy when
As required to maintain Average CPU utilization at 70

Take the action
Add or remove capacity units as required

Instances need
300 seconds to warm up before including in metric

Scale in
Enabled
